Abstract

A clip for attaching a strap to a pair of eye wear, such as goggles, includes a body portion, a slot to secure an end of the strap, a detent supported on the body to rotatably secure the clip to the goggle, and an engagement member for removably attaching the clip to the goggle. In one embodiment, the engagement member is a pivotal fastener that is movable between a position where the clip is attached to the goggle body and a position where it is removed from the goggle.
